

WHO WE ARE

Regeneron is a global biotechnology company that invents life-transforming medicines for people with serious diseases

REGENERON
SCIENCE TO MEDICINE®

TECHNOLOGY LEADER

- Proprietary *VelociSuite*® technologies were designed to address drug development bottlenecks and enable targeted, efficient study of diseases and the creation of new therapeutics¹
- The Regeneron Genetics Center®, one of the world's largest integrated programs of its kind, was created to enable a deeper understanding of how human genetics may impact disease¹

VELOCISUITE®

 **VELOCIMOUSE®** **VELOCI-BI®**
 **VELOCIGENE®** **VELOCIHUM®**
 **VELOCIMAB®** **VELOCIT®**
 **VELOCIMMUNE®** **VELOCINATOR™**
VELOCIVAX™

VELOCIGENE®

- The foundation of many steps in the development process
- A high-throughput approach utilizing BAC (bacterial artificial chromosome) vectors that can generate precise alterations of very large stretches (>75 kb) of genetic information²

VELOCIMOUSE®

- Enables accelerated generation of genetically modified mice³
- Used with VelociGene to generate murine disease models, validate targets, and test drug candidates³

VELOCIMMUNE®

- Accelerates the development of fully human antibodies⁴
- VelociImmune mice express the human variable Ig regions and were generated using VelociMouse⁵

VELOCI-BI®

- Full-length, human bispecific antibodies amenable to standard antibody manufacturing techniques^{6,7}
- Pharmacokinetic properties similar to natural antibodies^{6,7}

VELOCIT®

- Assists in the creation of fully human therapeutic TCRs (T-cell receptors) against tumor and viral antigens⁹

VELOCIMAB®

- Allows rapid antibody candidate selection and generation of production cell lines⁸
- Enables antibody production at scale⁸

VELOCIHUM®

- Regeneron's immunodeficient mouse platform that allows accurate testing of human therapeutics⁸

VELOCINATOR™

- Enables drug discovery through identification of therapeutic target pairings and optimization of bridging antibody-binding domains⁸
- Being investigated in enzyme replacement therapies and oncology and genetic medicines⁸

VELOCIVAX™

- Enables generation and validation of potential messenger RNA-based therapeutics in-house to support the preclinical advancement of vaccine and immune-modulating technologies⁸
- Proprietary platform allows teams to iterate quickly, combine new mRNA candidates with our broader oncology toolkit (including bispecific antibodies and checkpoint inhibitors), and to explore future applications in other therapeutic areas⁸

The Regeneron Genetics Center, home to the largest and most diverse genomic database in the world¹

Leveraging internal resources to identify drug targets

The primary goal is to improve patient outcomes by identifying novel drug targets, clinical indications for development programs, and genomic biomarkers for pharmacogenomic applications²
